VISIT Yamaguchi Industrial Promotion Foundation

HIBIKI

miyahara

A Japanese (Yamaguchi Prefecture) SME Support Organization Specializing in Manufacturing Business Matching

The Yamaguchi Industrial Promotion Foundation is a public interest foundation that supports small and medium-sized enterprises (SMEs) in Yamaguchi Prefecture to improve their business performance and profitability.

Together with three companies engaged in the manufacturing of semiconductor-related components (precision machining, design & assembly, and surface treatment), we will exhibit at SEMICON Taiwan.

Public interest incorporated foundation : Yamaguchi Industrial Promotion Foundation

Reliable Manufacturing System Backed by Technical Expertise

We provide comprehensive OEM solutions, covering the design, machining, and assembly of automated production equipment.

Miyahara has established a flexible production system capable of responding quickly to a wide variety of customer needs.

With our experienced in-house manufacturing facilities and domestic and international partner network, we deliver the optimal manufacturing and logistics solutions with outstanding cost performance.

Precision Parts Manufacturer Turning Researchers' Ideas into Reality

We manufacture custom precision parts with micron-level accuracy.

Our expertise in milling and turning enables highly accurate machining.

By utilizing advanced turning and milling technologies, we produce high-precision components with exceptional quality.

We excel at machining thin-walled parts and complex geometries that are difficult to manufacture while maintaining precise dimensional accuracy and careful handling.

Our strengths include cylindrical machining with dimensional accuracy of up to 10 μm and high-value-added five-axis machining.

Challenge Toward Zero Particles!

We provide proprietary anodizing technologies for critical semiconductor manufacturing equipment components, including ultra-corrosion-resistant anodizing and anodizing that combines both excellent corrosion resistance and heat resistance.

Our technology minimizes particle generation to the greatest extent possible, helping customers improve semiconductor manufacturing yield.
